Depth of Field Research

Beibarys Myrzash — Sep 20

Progress

- Implemented and validated the full DoF pipeline on a complex OBJ scene using physical camera parameters, including a basic screen-space DoF baseline and a Blender Cycles ray-traced reference. Initial comparison shows the screen-space method is much faster but exhibits more haloing/color bleeding around depth discontinuities, while Cycles gives smoother and more physically correct defocus.

Next Steps

- Transition to AI solution.
- Wait for the next tasks from professor.
